Premium Lift

**The height of a bed
should not be
underestimated**

**What if you could truly
prevent bed fall-related
injuries?**

If you are looking to purchase a floor level bed to decrease the risk of fall injuries you should purchase the lowest possible bed, rather than a bed that lowers to 10cm

or higher in the hope that it could serve as an all purpose bed, this would not be a viable alternative and would lead to more expense as a lower bed would still need to be purchased. There is a significant difference in impact force by increasing the height from 6.7cm to 10cm above the ground.

Ultra Low Bed is a unique system, which allows the platform to be lowered to as little as 6.7cm from the floor ensuring complete user and patient safety. Also, equipped with a modern Anti-Entrapment System that reduce the lowering speed when the bed reaches 12cm from floor level.
